GeoData 4 JIRA Visualization extensions

Our team

Pavol Goliaš

Tomáš Matula

Andrej Ďumbala

Karol Bujaček László Nagy Jozef Szadvári

Motivation

- GeoData 4 JIRA
- Bratislava, New Town
 - participatory budgeting (voting)
 - Easier communication between people and local government
 - Simplification of officers work (money and time saving)
- Over 800 created issues decent amount of data to process
- Our motivation what we can do with collected data

Our goals

 Visualization (heat-map) based on custom defined metrics

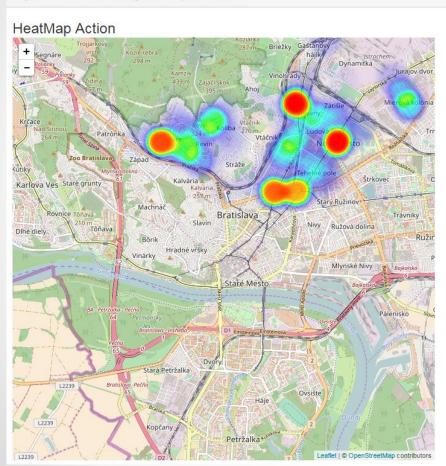

- Map with pre-defined datasets (trash bins, lamps, ...) and interaction with data
- Android application allowing users to create issues on the map

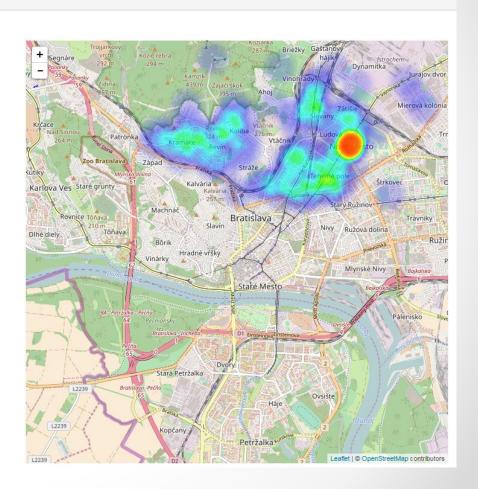

Custom heat-map

- Heat layer in map is based on custom metrics
 - Spent money
 - Votes
 - Required time
- Customized heat-map integrated with JIRA

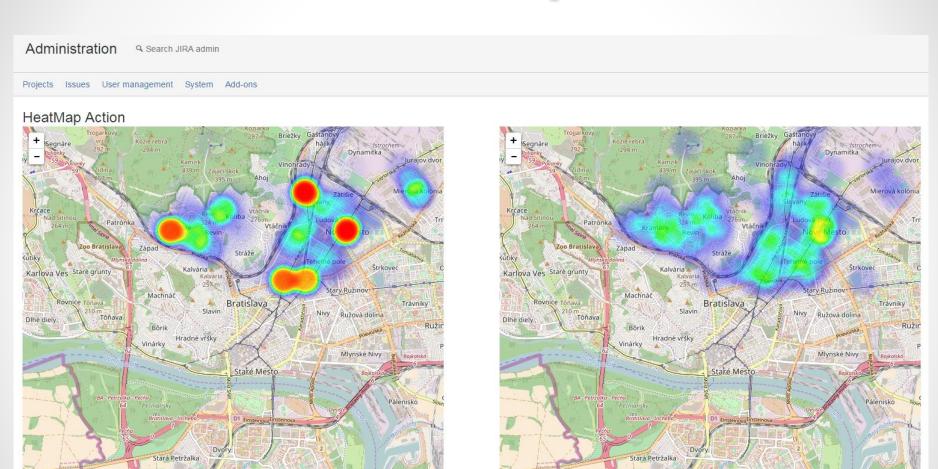

Real collected data: heat-map based on votes

Projects Issues User management System Add-ons

Real collected data: heat-map based on fix-time

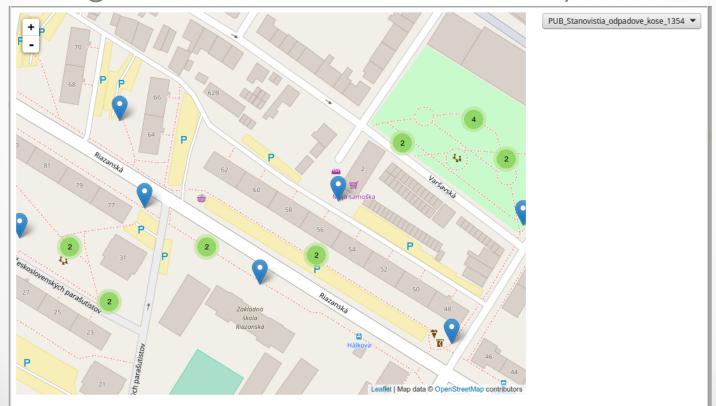

Ovsište

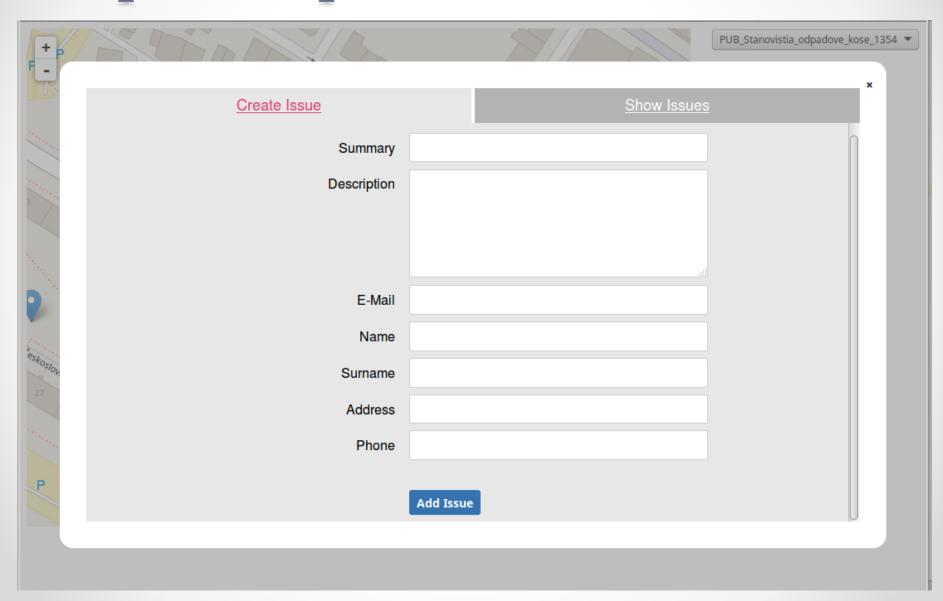

Petržalka*

Map with pre-defined datasets

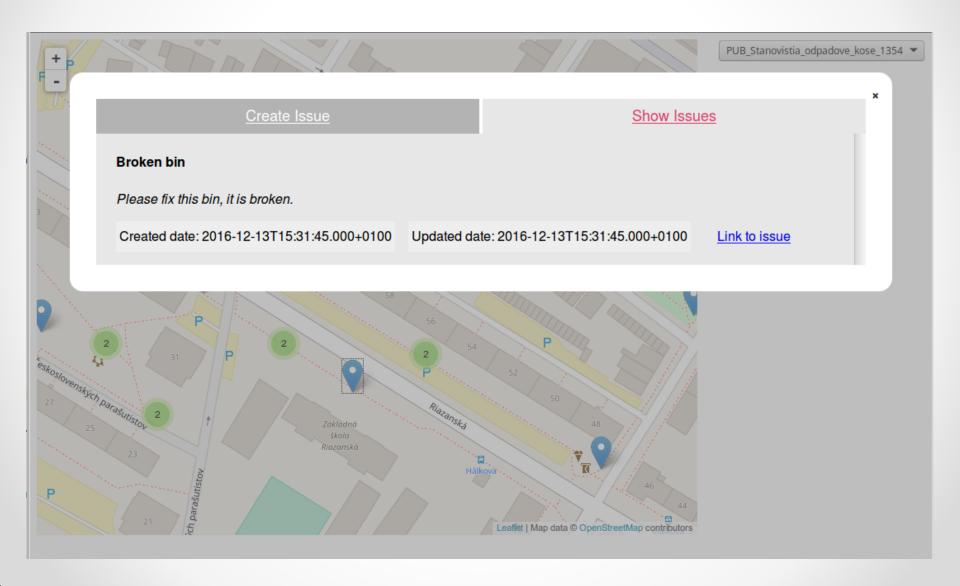

- Enable users to create issues upon existing objects
 - o Public lights, trash bins, ...
- Tracking issues related to dataset entry

Map with pre-defined datasets

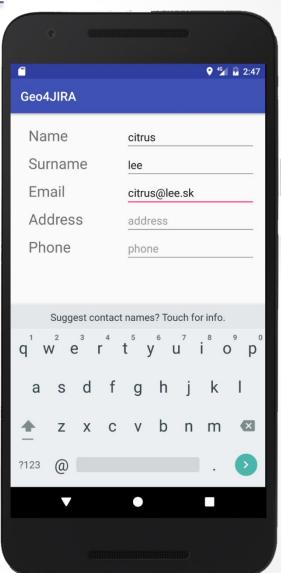

Map with pre-defined datasets

Android application

- Provide interface to create issues with given location
- Store user information to simplify issue creations

Plans for future

- Heat-map based on timeline
 - JIRA provides search with custom parameters
- Extension of Android application
 - Visualization of collected data
 - Usage of pre-defined datasets
- Enable simple attachments submitting
